

“*Congratulation*”

JAO is indexed in Emerging Sources Citation Index (ESCI)

We are glad to announce that the **Journal of Audiology and Otology (JAO)** is currently **indexed in Emerging Sources Citation Index (ESCI)** which is a new index provided by Clarivate Analytics (former Thomson Reuters IP & Science). ESCI has extended the universe of publications in Web of Science to include high-quality and peer-reviewed publications of regional importance in emerging scientific fields. All publications of the JAO are now searchable in Web of Science. By inclusion of JAO to ESCI, we strongly believe that JAO will be able to be considered for the inclusion in SCI(E) in the near future, and also hope the papers published on JAO will give attraction and motivation to its both authors and readers, and consequently will contribute to enhance the field of Audiology and Otology.
